

When **smaller regional health systems** confront inefficiencies in manual referral processes, they must safeguard against substantial revenue losses and patient leakage. Although they can lean on traditional manual workflows, these alternatives are error-prone and severely restrict operational capabilities, leading to potential financial instability. Therefore, we developed a cutting-edge solution that empowers health networks to gain efficiency and revenue assurance through our innovative real-time referral management system. It incorporates advanced AI to automate processes and make them intuitively user-friendly.
